Naturalistic Observation Protocol:

- Gather data on how long people wait for washers and dryers.

- Analyze the age demographic of the typical laundromat users.

- Gather the percentage of users that leave the laundromat after putting their clothes in the washer or dryer.

- Observe the percentage of users who wait at the laundromat for their clothes to be done.

- Measure how long it takes for people to move their laundry over after it finishes the wash cycle.

- Are people more inclined to leave when a certain demographic is present in the laundromat.

- Out of the people that stay at the laundromat, how many use their phones.

- Observe the different types of loads that people put in and how many they typically do in one visit.

- Observe if people respect other people's clothes when the owner is not present.
